Globally Ubiquitous, Multiscale Symmetries

COVER PHOTOS

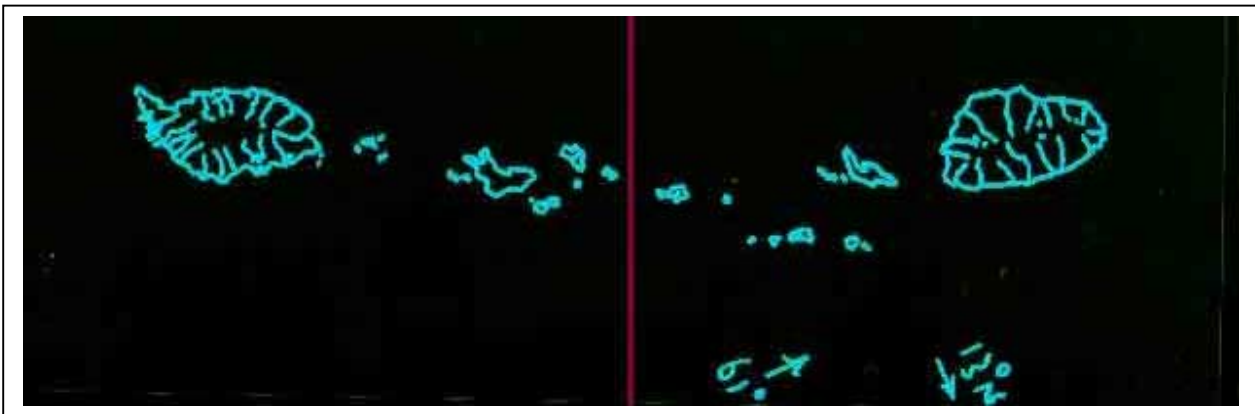

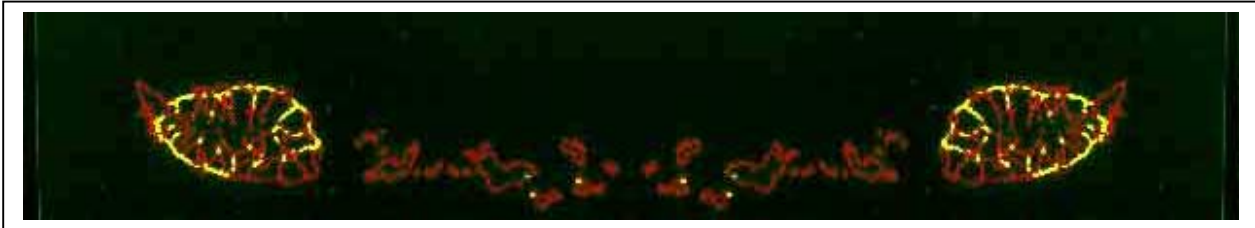

The **Dust-Cover Photo**, above, shows the 1st of my Red River Delta symmetries.

The **Cover Photo** below it shows the Impact Hemispheric limb BOUNDARY (IHBO)-centred East Amazonia symmetry, the non-randomly long lineal coincidences (yellow) between the mirrored map forms.

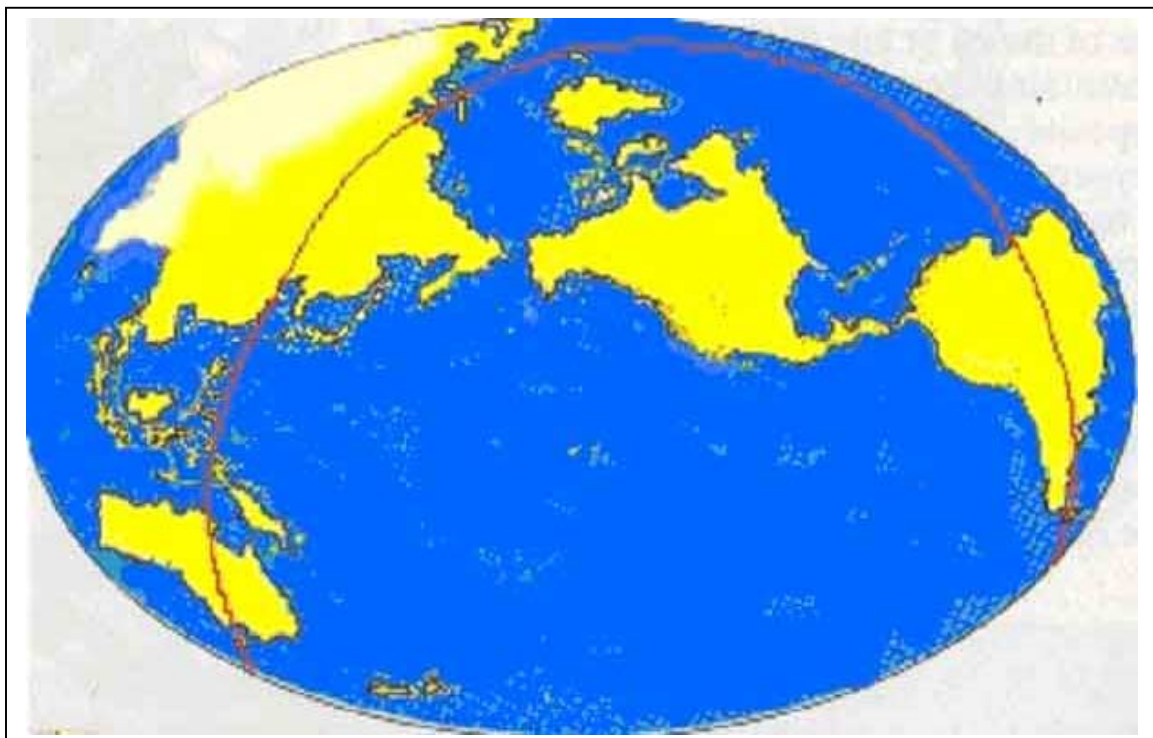

The **Back Cover Photo**, below, shows another very strong symmetry between St Lucia and St Vincent islands in the Lesser Antilles, slides 56-7 in Vol 0 Slide Show, showing local IHBO, global IHBO.

These ubiquitous, globally distributed, multidirectional, multiscale symmetries are nested over many orders, globally, to super-continental (PIRO-IRO, 3.1) scale.

Consistent with macro-symmetry explanation (Vol 1), such nesting is difficult to explain except as serm cluster phenomena (SERMs, 4.5-11), which are tellingly, similarly nested, 0.1.

Global IHBO:

The **Frontispiece** below shows the Lake Victoria 1 symmetry.
